- (1) The equipment adopts universal automatic blanking.
- (2) Winding error alarm, blocking alarm.
- (3) Dual-shaft high-power pay-off: maximum load of 30 kg/shaft.
- (4) Flat line diameter application range: 0.15-1.5mm thickness, width 1.0-4.0mm circular line diameter application range :0.5-2.2mm.
- (5) Automatic universal blanking structure.
- (6) Four wire ends can be produced

Electric voltage 220V

Power rate 650-1000W

The body size is 2700×1600×1500mm

The production capacity is about 800-1200 / hour

Equipment weight 180KG

- (1) The product defect rate is less than 3 ‰.
- (2) Man-machine interface, fault automatic prompt, troubleshooting less than 5 minutes.
- (3) Dummy module molding design, no need to change the machine type debugging, switching machine type within 30 minutes to complete.
- (4) The symmetry of both sides of the product produced is good, and the error of the circle diameter can be controlled within 0.02mm.
- (5) The single head line change time is effectively controlled within 5 minutes,(the two-axis line change time is about 10 minutes) the operator can complete the line change and change the machine type.
- (6) Equipment maintenance is easy, the operator can complete the usual maintenance and maintenance of the equipment, ultra-low consumption cost (equipment consumption can be recycled and reused).
- (7) Program and equipment split design, can effectively avoid equipment 24 hours operation overload operation caused by machine failure maintenance.
- (8) The transmission power adopts the 8 axis simultaneous double combination imported servo motor transmission power precision file step compensation structure design (the corresponding thrust is equal to the output of 16 axis motor).

Remark

Optional configuration: automatic feeding, material does not grab alarm function, material does not meet the standard alarm function, material error alarm function.
